The VDW tap outlet is design to work with the ROX water electrolyser.

Hoshizaki have researched the most effective method of hand washing for the maximum benefit.

Comparing all methods of sanising hands including basic water, soap and water, sanistising soap and water, normal measure of alcohol gel, double measure of alcohol gel and finally the ROX VDW taps.

Alcohol gel was the nearest to ROX but still well behind and of course it is worth remembering that alcohol gel does not deal with bacteria spores as hospitals have discovered.

The principal is simple, auto sensor taps design to run automatically for a set time (15 seconds each flow is optimum), the first stream which is mild alkaline removes contaminates (including spores) this flow is illuminated with blue light, the second stream takes over (red illumination) with mild acidic water that kills bacteria literally in seconds. No soap needed, no need to touch taps, optimum effectiveness if the user stays for the 30 seconds. If they walk before complete the tap will still run, creating a check point for a near by manager and of course peer pressure to remain.

This offers hand washing due diligence at its highest level.
